PREVENTIVE MAINTENANCE REPORT

Targeted Host: Technical Assessment & System Health

PREPARED FOR:

Bank of Dream Public Company Limited

PREPARED BY:

[PTS] Professional Team Services

Report Cycle: 2025Q4
Generated Date: 2025-12-19 00:41
Total Hosts Monitored: 1

DOCUMENT CONTROL & PREFACE

1. Document Information

Report Type:	SELECTED HOSTS REPORT
System Scope:	PM-Core Automation Monitoring
Classification:	Confidential
Target Hosts:	centserver1.local

2. Objective & Scope

This document provides a **comprehensive technical health check analysis** of the computer systems. The objectives are:

• To analyze detailed system resource utilization (CPU, Memory, Disk).
• To verify system availability and identify operational risks.
• To serve as operational evidence for **ISO 20000 / ISO 27001** compliance audits.

3. Contact Information

For any inquiries regarding this report, please contact:
Professional Team Services
Email: contactcenter@g-able.com
Tel: 02-781-9000

Executive Summary

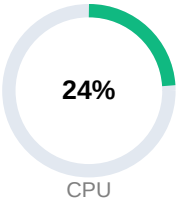
HEALTH SCORE
100%

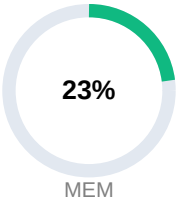
Healthy Systems	1
Warning Systems	0
Critical Systems	0
Offline / No Data	0

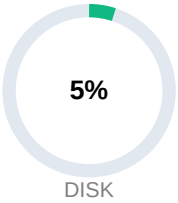
Host Status Overview

Hostname / IP	OS	Last Seen	Status	CPU	MEM	DISK
centserver1.local 192.168.56.101	CentOS Stream 9	19 Dec 00:08	Up	24%	23%	5%

Host Detail: centserver1.local







System Information

Hostname:	centserver1.local
Data Snapshot:	2025-12-19 00:08:30 (Thai Time)
OS:	CentOS Stream 9
Kernel:	5.14.0-319.el9.x86_64
Uptime:	15 hours, 37 minutes
IP:	192.168.56.101
Platform / Virt:	VirtualBox
Host ID:	a8c06538

Mount Points

Mount	Type	Size	Used	Usage %	Status
/boot	xfs	960M	232M	25.0%	OK
/run	tmpfs	356M	19M	6.0%	OK
/	xfs	27G	1.3G	5.0%	OK
/dev	devtmpfs	4.0M	0	0.0%	OK
/dev/shm	tmpfs	890M	0	0.0%	OK
/run/user/1000	tmpfs	178M	0	0.0%	OK
/run/user/0	tmpfs	178M	0	0.0%	OK

Resource Usage: Top Processes

Top 5 Processes by CPU Usage	%
systemd-logind	7.0%
pm_collect.sh	3.0%
systemd-journal	2.0%
kworker/0:3-eve	1.0%
systemd	0.0%

Top 5 Processes by Memory Usage	%
firewalld	2.3%
NetworkManager	1.1%
systemd	0.8%
systemd	0.7%
systemd	0.7%

Repositories

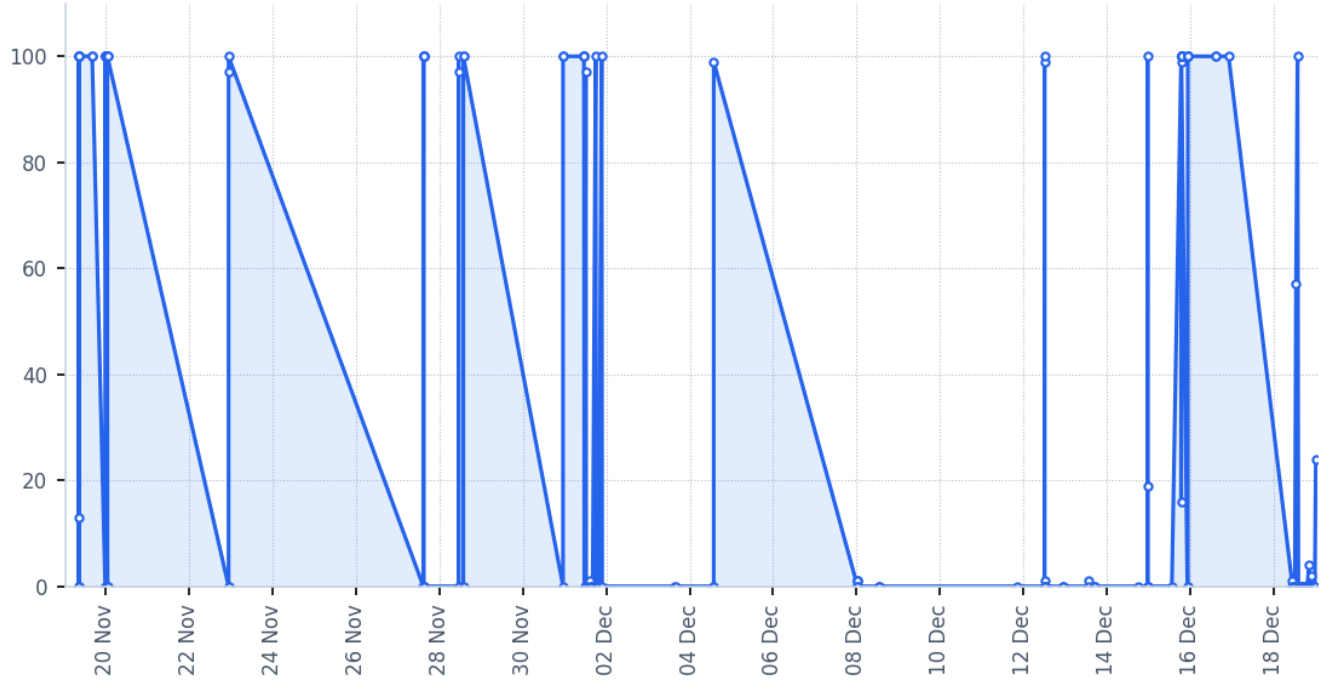
Repo ID	Name	Type
appstream	CentOS Stream 9 - AppStream	Network
baseos	CentOS Stream 9 - BaseOS	Network
extras-common	CentOS Stream 9 - Extras packages	Network

Analysis & Recommendations

- All systems healthy (<80%).

CPU Performance Analysis: centserver1.local

Scope: 19 Nov 2025 - 19 Dec 2025



Statistics Summary

Metric	Current	Peak (30d)	Average	Assessment
Usage	24.0%	100.0%	32.9%	Transient Peak

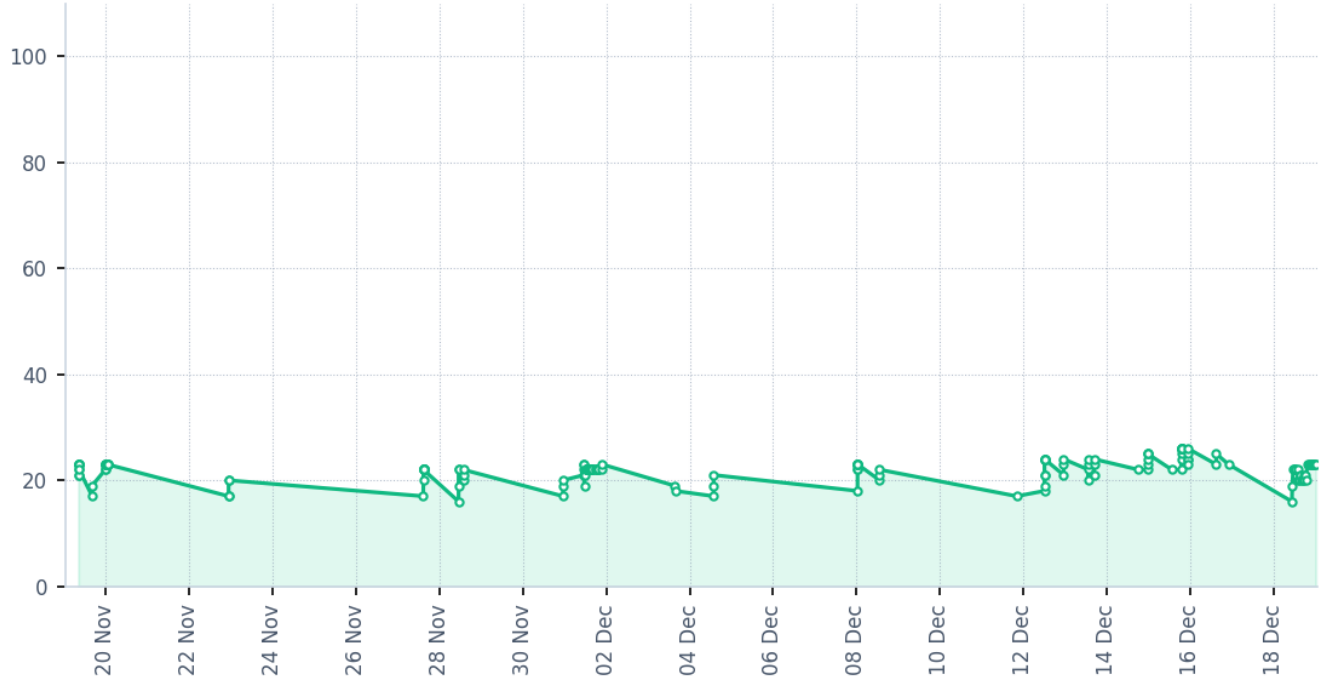
Analysis & Observations

Transient Spikes: While average load is normal (32.9%), critical peaks up to 100.0% were detected. Investigate specific scheduled tasks.

Data consistency check passed. No significant gaps detected in the monitoring period.

Memory Usage Analysis: centserver1.local

Scope: 19 Nov 2025 - 19 Dec 2025



Statistics Summary

Metric	Current	Peak (30d)	Average	Assessment
Usage	23.0%	26.0%	22.0%	Normal
Swap	-	0.0%	-	Normal

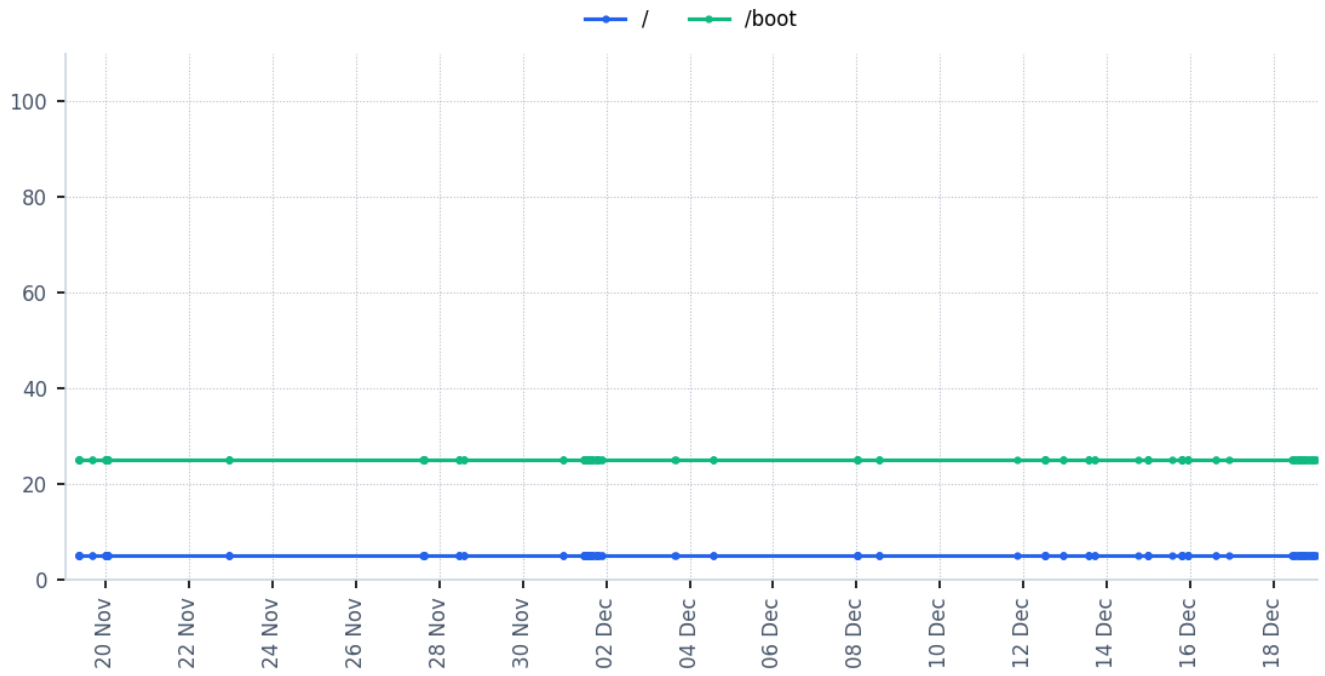
Analysis & Observations

Normal Operation: Resource consumption is within standard baselines (Avg: 22.0%).

Data consistency check passed. No significant gaps detected in the monitoring period.

Disk Usage Analysis (OS Partitions): centserver1.local

Scope: 19 Nov 2025 - 19 Dec 2025



Statistics Summary

Mount Point	Size	Current	Peak (30d)	Assessment
/	27G	5.0%	5.0%	Normal Operation
/boot	960M	25.0%	25.0%	Normal Operation

Analysis & Observations

Disk usage analysis is detailed in the table above based on OS partition monitoring.

APPENDIX: METHODOLOGY & CRITERIA

1. Health Score Interpretation

Score Range	Level	Meaning
90% - 100%	Excellent	All systems are healthy or have minimal load.
70% - 89%	Good / Fair	System operational but monitor warning signs.
50% - 69%	Warning	Multiple hosts are degraded or critical resources detected.
0% - 49%	Critical	Major outages or widespread failures. Immediate action required.

2. Status Definitions & Logic

Status	Weight	Condition / Logic
Up	10	Normal Operation. Online (< 6h). Resource Usage (CPU, MEM, DISK (/ root)) < 80%.
Warning	7	High Load. Online. Resource Usage (CPU, MEM, DISK (/ root)) 80% - 85%.
Degraded	3	Critical Load. Online. Resource Usage (CPU, MEM, DISK (/ root)) >= 86%.
Offline	0	Connection Lost. No data > 6 Hours (Last Seen).

3. Calculation Trace (Current Report)

$$\textbf{Health Score} = \frac{\text{SUM (Count x Weight)}}{\text{Total Hosts x 10}} \textbf{ x 100}$$

Current Data:	Total: 1 | Up: 1 | Warn: 0 | Deg: 0 | Off: 0
Step 1: Weighted Sum	(1x10) + (0x7) + (0x3) + (0x0) = **10**
Step 2: Max Score	1 Hosts x 10 Points = **10**
Step 3: Final Calculation	(10 / 10) * 100 = **100% (Excellent)**

4. Standards Alignment & Compliance Support

This document is generated to serve as verifiable operational evidence, designed to support the organization's compliance with international standards regarding IT service management and information security.

Metric Framework & Methodology:
The Health Score is calculated based on **Apdex (Application Performance Index)** principles for performance scoring, aligned with **NIST SP 800-137** guidelines for Information Security Continuous Monitoring (ISCM) and metric quantification.

ISO/IEC 20000-1:2018 (IT Service Management):
- **Clause 9.2 (Service Reporting):** Provides comprehensive reports on service performance and suitability.
- **Clause 8.7 (Service Availability):** Monitoring availability and recording outage events (Offline status).

ISO/IEC 27001:2022 (Information Security):
- **Control 5.37 (Documented Operating Procedures):** Serves as a record of routine preventive maintenance.
- **Control 8.6 (Capacity Management):** Monitoring resource utilization (CPU, Memory, Disk) to prevent system overload and ensure required system performance (formerly Control A.12.1.3 in the 2013 version).
