PREVENTIVE MAINTENANCE REPORT

Executive Summary: Technical Assessment & System Health

PREPARED FOR:

Bank of Dream Public Company Limited

PREPARED BY:

[PTS] Professional Team Services

Report Cycle: 2025Q4
Generated Date: 2025-12-19 00:42
Total Hosts Monitored: 3

© Copyright 2025 [PTS] Professional Team Services. All Rights Reserved.

DOCUMENT CONTROL & PREFACE

1. Document Information

Report Type:	EXECUTIVE SUMMARY
System Scope:	PM-Core Automation Monitoring
Classification:	Confidential

2. Objective & Scope

This document provides a **high-level executive overview** of the system health status. The objectives are to highlight critical risks, summarize resource utilization trends, and support management decision-making regarding IT infrastructure.

3. Contact Information

For any inquiries regarding this report, please contact:

Executive Summary

HEALTH SCORE
76%

Healthy Systems	2
Warning Systems	0
Critical Systems	1
Offline / No Data	0

Host Status Overview

Hostname / IP	OS	Last Seen	Status	CPU	MEM	DISK
GSBSERVER 192.168.1.62 192.168.56.103	CentOS Linux 7 (Core)	19 Dec 00:29	Degraded	0%	19%	90%
centserver1.local 192.168.56.101	CentOS Stream 9	19 Dec 00:08	Up	24%	23%	5%
redhatserver1.local 192.168.56.102	Red Hat Enterprise Linux	19 Dec 00:08	Up	53%	31%	10%

APPENDIX: METHODOLOGY & CRITERIA

1. Health Score Interpretation

Score Range	Level	Meaning
90% - 100%	Excellent	All systems are healthy or have minimal load.
70% - 89%	Good / Fair	System operational but monitor warning signs.
50% - 69%	Warning	Multiple hosts are degraded or critical resources detected.
0% - 49%	Critical	Major outages or widespread failures. Immediate action required.

2. Status Definitions & Logic

Status	Weight	Condition / Logic
Up	10	Normal Operation. Online (< 6h). Resource Usage (CPU, MEM, DISK (/ root)) < 80%.
Warning	7	High Load. Online. Resource Usage (CPU, MEM, DISK (/ root)) 80% - 85%.
Degraded	3	Critical Load. Online. Resource Usage (CPU, MEM, DISK (/ root)) >= 86%.
Offline	0	Connection Lost. No data > 6 Hours (Last Seen).

3. Calculation Trace (Current Report)

$$\textbf{Health Score} = \frac{\text{SUM (Count x Weight)}}{\text{Total Hosts x 10}} \textbf{ x 100}$$

Current Data:	Total: 3 | Up: 2 | Warn: 0 | Deg: 1 | Off: 0
Step 1: Weighted Sum	(2x10) + (0x7) + (1x3) + (0x0) = **23**
Step 2: Max Score	3 Hosts x 10 Points = **30**
Step 3: Final Calculation	(23 / 30) * 100 = **76% (Good)**

4. Standards Alignment & Compliance Support

This document is generated to serve as verifiable operational evidence, designed to support the organization's compliance with international standards regarding IT service management and information security.

Metric Framework & Methodology:
The Health Score is calculated based on **Apdex (Application Performance Index)** principles for performance scoring, aligned with **NIST SP 800-137** guidelines for Information Security Continuous Monitoring (ISCM) and metric quantification.

ISO/IEC 20000-1:2018 (IT Service Management):
- **Clause 9.2 (Service Reporting):** Provides comprehensive reports on service performance and suitability.
- **Clause 8.7 (Service Availability):** Monitoring availability and recording outage events (Offline status).

ISO/IEC 27001:2022 (Information Security):
- **Control 5.37 (Documented Operating Procedures):** Serves as a record of routine preventive maintenance.
- **Control 8.6 (Capacity Management):** Monitoring resource utilization (CPU, Memory, Disk) to prevent system overload and ensure required system performance (formerly Control A.12.1.3 in the 2013 version).
